
Medically Tailored Groceries (MTG)

Health-supporting staple groceries for food items linked to improved health outcomes

Goal: improve diabetes control and address emergent food insecurity for patients with moderate medical complexity and emergent social risks

Clinical intent

- Enhance diet quality by increasing intake of underconsumed, health-promoting foods
 - Improve diabetic control and address food insecurity
 - Support mental health and reduce stress related to food access
-

When to consider

- Worsening diabetes control or newly introduced social risk such as job loss, caregiving strain, or emergent food insecurity
 - Patients stepping down from MTM after acute issues and physical limitations improve
-

Program Essentials

- Food items selected from an approved product list linked to improved health outcomes and generally underconsumed in the target population
 - Delivered through health system partnerships with food retailers, delivery companies, and community locations
-

Design

Dose	Duration	Distribution
\$50-\$200/month in approved grocery items	3-6 months with reassessment as needed	Home delivery, clinic-based distribution, or community locations such as food pantries

Referral & workflow

- Identify eligible patients through diabetes control indicators and nutrition security screening, including social risk factors
 - Confirm patients can shop, store, and prepare food; reassess at 3-6 months to determine continuation or step up/down (e.g., MTM or PRx)
-
